EXPERIMENT - 12

12. Perform a 270-degree rotation clockwise along the y-axis for the given image.

Aim

To rotate a given image by 270 degrees clockwise using Python and OpenCV.

Procedure

1. Import the OpenCV library.
2. Read the input image using cv2.imread().
3. Rotate the image by 270 degrees clockwise.
4. Display the original and rotated images.
5. Close all windows.

Program

```
import cv2

img = cv2.imread("image.jpg")

if img is None:
    print("Image not found")
else:
    rotated = cv2.rotate(img, cv2.ROTATE_90_COUNTERCLOCKWISE)

    cv2.imshow("Original Image", img)
    cv2.imshow("270 Degree Rotated Image", rotated)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

Sample Input

Input image: image.jpg

Output

Original Image

270° Clockwise Rotated Image

Result

Thus, the given image was successfully rotated by 270 degrees clockwise using OpenCV.
