ITA0501 - Computer Vision

1) A) Salt-and-Pepper noise in CCTV image.

Technique :- Median Filtering.

Reason :- Removes black and white dots effectively while preserving image edges.

2) A) Gaussian noise in satellite image

Technique :- Guassian filtering

Reason :- Reduces Gaussian noise and smoothens the image.

3) A) Random noise in medical x-ray with fine edges.

Technique :- Bilateral filtering

Reason :- ~~Reduces guassian~~ Removes noise while preserving important edges and fine details.

4) A) Black and white dots in ~~tancered~~ scanned document

Technique :- Median Filtering.

Reason :- Removes randomly scattered black and white dots without blurring text.

5) A) Low-light image with heavy grain :-

Technique :- Non-local means (NLM) Denoising.

Reason :- Reduces heavy noise while preserving important image details.
