EXPERIMENT - 17

17. Design and implement a water marking technique to insert the watermark into the original effectively image using Open CV.

Aim

To design and implement a watermarking technique to insert a watermark into an original image using OpenCV in Python.

Procedure

1. Import the OpenCV library.
2. Read the original image.
3. Resize the image to fit the screen.
4. Insert watermark text onto the original image using cv2.putText().
5. Save the watermarked image.
6. Display the original image and the watermarked output image.

Program:

```
import cv2

img = cv2.imread("input.jpg")

if img is None:
   print("Image not found")
else:
   img = cv2.resize(img, (500, 350))
   watermarked = img.copy()

   cv2.putText(watermarked, "WATERMARK",
            (50, 320),
            cv2.FONT_HERSHEY_SIMPLEX,
            1, (255, 255, 255), 2)

   cv2.imshow("Original Image", img)
   cv2.imshow("Watermarked Image", watermarked)

   cv2.imwrite("watermarked.jpg", watermarked)

   cv2.waitKey(0)
```

cv2.destroyAllWindows()

Sample Input:

Sample Output:

Result

The watermark was successfully inserted into the original image using OpenCV and saved as a new image file.
