EXPERIMENT - 11

11. Perform a 180-degree rotation clockwise along the y-axis for the given image

Aim:

To rotate a given image by 180 degrees clockwise using Python and OpenCV.

Procedure

1. Import the OpenCV library.
2. Read the input image using cv2.imread().
3. Rotate the image by 180 degrees using cv2.ROTATE_180.
4. Display the original and rotated images.
5. Close all windows.

Program:

```
import cv2

img = cv2.imread("input.jpg")

if img is None:
    print("Image not found")
else:
    rotated = cv2.rotate(img, cv2.ROTATE_180)

    cv2.imshow("Original Image", img)
    cv2.imshow("180 Degree Rotated Image", rotated)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

Sample Input:

Input image: input.jpg

Sample Output:

Original Image

180° Rotated Image

Result:

Thus, the given image was successfully rotated by 180 degrees clockwise using OpenCV.
