

EXPERIMENT – 2

2. Perform basic Image Handling and processing operations on the image is to read an image in python and Convert an Image to Blur using Gaussian Blur.

Aim

To read an image using Python and OpenCV and apply Gaussian Blur to the image.

Procedure

1. Import the OpenCV library.
2. Read the input image using `cv2.imread()`.
3. Check whether the image is loaded successfully.
4. Apply Gaussian Blur using `cv2.GaussianBlur()`.
5. Display the original and blurred images.
6. Wait for a key press.
7. Close all image windows.

Program

```
import cv2

image = cv2.imread("image.jpg")

if image is None:
    print("Image not found!")
else:
    blurred = cv2.GaussianBlur(image, (15, 15), 0)

    cv2.imshow("Original Image", image)
    cv2.imshow("Gaussian Blurred Image", blurred)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

Sample Input

image.jpg

Sample Output

Result

Thus, the image was successfully read and Gaussian Blur was applied using Python and OpenCV.
