

EXPERIMENT - 6

6. Perform basic Image Handling and processing operations on the image is to read an image in python and Convert an Image to erode using Erode function.

Aim:

To read an image in Python and perform image erosion using the OpenCV erode() function.

Procedure:

1. Import the OpenCV library.
2. Read the input image using cv2.imread().
3. Create a kernel using numpy.ones().
4. Apply the erosion operation using cv2.erode().
5. Display the original and eroded images.
6. Observe the difference between the two images.

Program:

```
import cv2
import numpy as np

img = cv2.imread("input.jpg")

kernel = np.ones((5, 5), np.uint8)

eroded = cv2.erode(img, kernel, iterations=1)

cv2.imshow("Original Image", img)
cv2.imshow("Eroded Image", eroded)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

Sample Input:

Input.jpg

Sample Output:

Eroded Image

Result:

Thus, the given image was successfully read and eroded using the OpenCV erode() function.
